

The Bathrobe Seam & Thread Inspection Checklist

Factory-direct since 1998
Karachi, Pakistan

Turn the robe inside out. Check all eight points out of the box. Then put it through two machine washes and check again, including the body for snagged loops — a robe that fails only after washing has a stitching or pile problem, not a trimming problem.

CHECK POINT	HOW TO CHECK	FAIL IF YOU SEE	OUT OF BOX	AFTER WASH
1 Belt — highest risk	Both ends, then run the full length through your fingers	Exposed seam edge; fuzz or tails at the ends; stitching lifting	☐	☐
2 Collar	Front collar edges and the collar-to-body join	Thread tails; loose or skipped stitches	☐	☐
3 Label & hanger loop	Lift the label; pull the loop gently	Untrimmed tails; loop stitching loose	☐	☐
4 Inner side seams	Front panels to back panel, full length	Tails; gaps; overlock stitches spaced wide	☐	☐
5 Armholes	All the way around, inside	Tails; seam opening under light pull	☐	☐
6 Inside of sleeve	Full length of the sleeve seam	Tails; stitches pulling apart	☐	☐
7 Inside of cuffs	Fold each cuff back	Tails; fraying at the fold	☐	☐
8 Bottom hem	Full circumference, inside and out	Tails; hem stitching loose or wavy	☐	☐

Three questions to ask your factory

1. Does the belt go through the same QC as the robe — or to one person who trims what he sees?
2. What SPI is the four-thread overlock running at, and what thread is on it? (Most run 5–6. Ask for 10–11.)
3. Is the person who trims threads the same person who does the final QC — and are they paid by the piece?

Already getting loose-thread reviews? Send your product link and 1–3 star reviews. Shayan Naseem will tell you which construction failure is behind each one — free.
